

INDIANA REGIONAL MEDICAL CENTER (IRMC)

COVID-19 Testing Information

IRMC has the limited capacity to perform in-house COVID-19 swab tests, backed up by send-outs to commercial labs. Supply chain issues with swabs, viral media, and reagents have made continuous in house testing a challenge. However, IRMC is exploring various avenues to prevent future disruption of timely testing.

We are only performing tests on a doctor's order, and have had to restrict testing to patients with symptoms of possible COVID, and to asymptomatic patients scheduled for an operative procedure. We also recently learned that CVS will have a very limited capacity to similarly test symptomatic patients with a doctor's order.

We have no capacity to extend testing to other people without COVID symptoms, and don't expect to have that capacity in the near future.

Community-wide Testing/Antibody Testing & Contact Tracing Information

All states and territories, including Pennsylvania are expected to develop community-wide testing and contact tracing capabilities, and we know that PA was awarded \$18+ million dollars, some of which is to be devoted to this. IRMC has received no information from the state and will probably hear about it on TV and in the local news.
